

CONTROLS

Control simulator GSK 988T (turning)

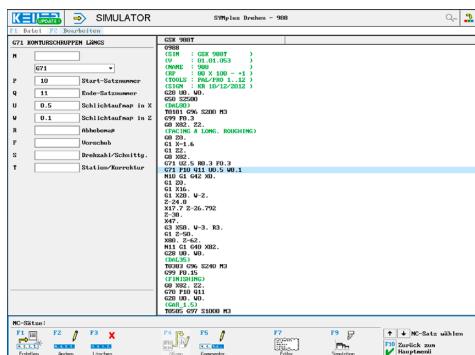

The control related simulator is an additional module for SYMplus. This simulator is used to learn the control system programming. A program generated by a postprocessor can also be edited and simulated.

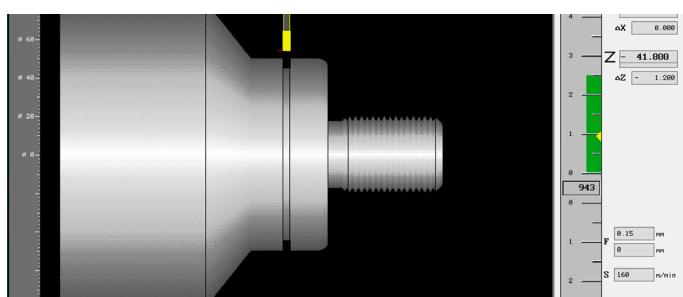

Help pictures and texts (for all input dialogues)

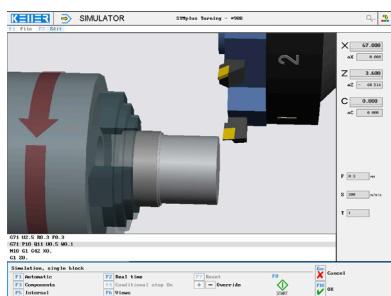

NC editor incl. input dialogue and syntax control

**Perfect control due to simulation with position indicator
(real time, fast mode, single block with path preview,
measurement function, ...)**

3D simulation with freely adjustable perspective
